EDUCATION

Dwarkadas J. Sanghvi College of Engineering

B.Tech, Artificial Intelligence & Machine Learning (Honours in Financial Technology)

CGPA: 9.65

Mumbai, India

Sep. 2024 – Present

EXPERIENCE

Mentoria

Mumbai, India (Hybrid)

Software Development Intern

Apr. 2026 – Present

- Took full ownership of the **Arya Chrome Extension (Manifest V3)**, building autofill adapters for **Lever**, **Indeed**, **Internshala**, and **LinkedIn** along with a job parser, pause/resume controller, and **OAuth/JWT** login handoff, and taking it from prototype to **Chrome Web Store** launch.
- Designed a **multi-tier answer-resolution pipeline** that answers application questions from verified profile data and a persistent cache before calling an **LLM**, cutting redundant API calls and preventing **AI hallucination** through strict grounding rules that keep every answer traceable to the user's resume.
- Identified and fixed a **critical security vulnerability** where a shared **LLM API key** was bundled into every installed copy of the extension, moving all AI calls behind a **JWT-authenticated backend proxy** so each request is tied to a single authenticated user.

Varak Welfare Society

Indore, India (Remote)

Full-stack Developer Intern

Sep. 2025 – Jan. 2026

- Built a scalable **subscription engine** using **Django**, **PostgreSQL**, and **Razorpay**, designing the **React.js** interface to handle **100%** of payment edge cases, including transactions for **unauthenticated guest users**.
- Migrated the platform from **Vue.js** to **React.js** to improve **mobile responsiveness** and reduce **initial load latency by 35%**, while building dynamic features like **Campaign pages** and an **admin dashboard**.

PROJECTS

Product Wizz (RAG-Based Review Analyzer) | React, FastAPI, LangChain, ChromaDB

- Engineered a **RAG pipeline** within a Chrome Extension to scrape and **generate vector embeddings** for product reviews from Amazon and Flipkart, enabling **semantic search** over unstructured data.
- Integrated the **Zephyr-7B LLM** locally to perform **sentiment analysis** and technical specification auditing, delivering **offline-capable insights** without external API costs or data dependency.

LLM From Scratch (GPT Implementation) | Python, PyTorch, NumPy, Pandas, Matplotlib

- Implemented a **decoder-only Transformer architecture** from the ground up in **PyTorch**, manually coding **Multi-Head Causal Attention** mechanisms and **Position-wise Feed-Forward networks**.
- Engineered a complete **pre-training pipeline** with custom **tokenizers** and **sliding-window data loaders**, optimizing convergence using **Layer Normalization** and **GELU activation functions**.

LocalBee (Geospatial Discovery Platform) | Next.js, FastAPI, PostgreSQL, Leaflet.js, TailwindCSS

- Developed an **interactive geospatial dashboard** enabling users to pin coordinates on a world map and store **metadata**, including custom ratings, descriptions, and image links.
- Engineered a **tag-based filtering architecture** to optimize location discovery, alongside full **CRUD capabilities** for real-time updates and deletion of travel records.

ACHIEVEMENTS

- **Open Source Contributor** - Langchain-ai, Elastic (21k+ stars), Backstage (by Spotify, 34k+ stars) and Grafana. Participated in GirlScript Summer of Code 2025.
- **1st Runner Up, AIML Domain Winner - CodeQuest Hackathon**: Built NyaySetu, a generative AI legal assistant with form generation and legal news.
- **2nd Runner Up, AIML Domain Winner - Hackops Hackathon**: Developed JournalPal.AI, a research tool for finding related academic papers.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript

AI/ML: LangChain, LangGraph, ChromaDB, Scikit-learn, Pandas, NumPy

Web Technologies: React.js, Next.js, TailwindCSS, Node.js, Express.js, FastAPI, Django, Astro

DevOps & Tools: Git, GitHub, Postman, PostgreSQL, MongoDB, Redis, Docker, MLflow, Sentry
