Education

Dwarkadas J. Sanghvi College of Engineering — Mumbai, India
*B.Tech in Artificial Intelligence and Machine Learning, CGPA: **9.65/10*** — *Sep 2024 – Present*

Experience

Mentoria — Apr 2026 – Present
Software Development Engineer Intern — *Mumbai, India (Hybrid)*

- Led the migration of Arya, Mentoria's AI job-search platform, to Supabase, moving **26,083 users**, **117K applications** and **227K emails** with **zero data loss** through a 16-stage idempotent Python pipeline.
- Designed every migration stage to default to a dry run and be safely re-runnable, so when a guardrail halted the run, the fix was a one-line patch to an untyped SQL parameter and a clean re-run.
- Shipped the Arya Chrome Extension solo, reaching **286 installs** and **200 active users** in its first week. It autofills LinkedIn, Workday and 3 more portals at a **95.6% field-fill rate**, tested by 152 E2E checks.
- Built a 4-tier answer pipeline that never guesses numbers or yes-or-no answers, leaving only about 10% of answers to the LLM, and moved an exposed shared API key behind a JWT-authenticated FastAPI proxy.
- Delivered Arya's SEO blog platform (CMS, React prerendering, JSON-LD, Redis and Celery) at near-zero cost. In its first week live, it brought in **1.25K clicks** from **28.6K Google impressions**.

Varak Welfare Society — Sep 2025 – Jan 2026
Software Developer Intern — *Indore, India (Remote)*

- Built a subscription payments engine (Django, PostgreSQL, Razorpay) with a React guest checkout.
- Migrated the frontend from Vue.js to React, cutting initial load time by **about 35%** through code splitting, dead-code removal, optimized assets and Vite bundling. Also built campaign pages and an admin dashboard.

Open Source and Achievements

- **Elastic (Kibana Fleet):** fixed silent force-unenroll failures on large fleets by batching API-key invalidation, and fixed agents staying active indefinitely after an agentless policy's deletion and stale bundled packages installing instead of the latest release. Added a policy namespace field to agent status events in two repositories.
- **Grafana (Pathfinder):** added gated, skippable challenge steps with session ownership, so one learner's Cancel cannot end another's live sandbox, and fixed a config validation issue that could crash the guide auto-open flow.
- **Backstage (Spotify):** fixed a rendering race condition that briefly displayed an incorrect not-found error when navigating between catalog entities, and wrote a regression test that checks the entity's state on every render.
- **CanSat 2026, DJS ARYA:** co-built the ground-station GUI for live telemetry graphs and maps. The team ranked **1st in India, 4th in Asia and 10th worldwide**, and won the inaugural Mark Walker Ground Station award.

Projects

VocalOps | *Python, LangGraph, FastAPI, Ollama, MLflow, Docker* — github.com/Nikshaan/VocalOps

- Built a local-first agent that turns voice or text into actions on any SQLite database, with a LangGraph human-in-the-loop approval gate on every write and undo. It runs fully offline on Ollama and faster-whisper.
- Created a 3-suite eval harness in MLflow, scoring **83%** accuracy locally and **90%** with Llama 3.1 8B on Groq for held-out cases, and added schema checks on LLM-generated SQL before any preview or commit.

ProductWizz | *TypeScript, React, FastAPI, LangChain, ChromaDB* — github.com/Nikshaan/ProductWizz

- Developed a Chrome extension that pulls specs and up to 100 reviews from Amazon.in and Flipkart and answers shopper questions with RAG, running completely local on a Zephyr-7B model through llama.cpp.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL
AI and ML: LangChain, LangGraph, ChromaDB, Scikit-learn, Pandas, NumPy
Web Technologies: React, Next.js, TailwindCSS, Astro, Node.js, Express.js, FastAPI, Chrome Extensions
Databases: PostgreSQL, Supabase, MongoDB, Redis, SQLite
DevOps & Tools: Git, GitHub, Docker, MLflow, Sentry, Postman, Puppeteer, pytest
